Sorkin financial management: 4.19-gold and silver short-term correction, still weak do not change [original 2013-4-19 11:14:18]

[我顶](#) Font Size: small

Fundamentals:

After the crash at the beginning of this week, many investors began to admission hunters, gold shop gold jewelry, gold bullion investment started selling the futures market but also brings a lot of new pay. Spot gold in Asian trading on Thursday (April 18) quickly dropped to \$ 1,336.10 / oz low bounce higher again, the daily chart shows the price of gold has three consecutive trading days closing Yang. Currently on file 1400 U.S. dollars / ounce, a key line of defense for short-term short of potential energy, once the breakthrough in space is expected to rise to the level of 1450/1480.

Before killing the market as early as the price of gold rare under strategist team of Goldman Sachs Group (Goldman Sachs) on Wednesday (April 10) suggest that investors short gold, objective look to 1450 dollars. At that time, the price of gold still in the high of \$ 1580. Goldman Sachs made the proposal a major reason is that gold ETF in the first quarter, a significant acceleration in capital outflows.

The current price of gold has long been below the target price set by Goldman Sachs, Goldman Sachs strategist who is still warning the downside risk of the price of gold. Goldman Sachs's top commodity strategist Jeffrey Currie wrote in a note to clients, "We believe there is still room for further selling ETF risk of large-scale positions, about 11% of the existing positions at current levels or higher price established. "

Thursday after the European session, the emergence of short covering and the price of gold fell further bargain hunting push gold prices higher. TD Securities (TD Securities) on Thursday published an article that, gold prices were boosted by higher short profit taking, and the Chinese market increased buying.

However, institutions and industry have said, this is not the hunters, and the medium and long term, long Dafanshenzhang I am afraid not so simple. Trust Company of The West before, commodities portfolio manager Claude ERB Duke University □ Duke University finance professor Campbell Harvey cooperation an academic study that the fair value of the gold close to 800 U.S. dollars / ounce. They calculated the relative ratio of gold and inflation data record since. To the U.S. consumer price index (CPI) is calculated, the average ratio of 3.2:1. Even to \$ 1400 / oz gold price calculation, this ratio is still as high as 6.03:1, which is the average nearly twice the level.

The international capital Soros also believes that gold as a safe-haven investment position has been compromised. It turns out that gold is not so safe investment. Euro verge of collapse last year when the price of gold also followed down to prove that the gold was originally the meaning of the ultimate safe haven asset does not have. Cause the market to a substantial reduction of gold.

Sorkin:

Spot gold: gold prices yesterday continuation Prior to rebound from the 1321 low potential energy, the Asia-Pacific in early gold again stepped back low of 1336, but strong buying support gold prices higher again to the nearest thousand mark, and then around the 1380-1400 range repeated shocks, the end of the level in early trading today, the price of gold remained running, and daily to maintain a three trading days to close positive gesture, gold experienced strong short indiscriminate bombing technical repair needs.

Trend of gold catch-22, lay down the basis of the development of the main line of the disadvantaged, but still significant rebound effect after the key support of the technical test 1320 area, so that in the last two trading days, the price of gold around 1320-1400 repeated shocks, 1400 uplink first breakthrough, but firm pressure multi-

potential energy will usher in accelerated heavy volume trend, whereas the gold market outlook is still weaknesses development.

4 hours was currently experiencing plunge slow climb trend, the main line of weak trend is still overmatched the involvement of short-term buying potential energy, with the increase in the Asian market demand for physical gold, gold short-term trend is expected to return to reason, the focus below the 1370/1320 offensive and defensive support.

Sorkin Roundup: Short-term recommendations do high sell low-residue around 1400-1320, interval Powei advantage of the opportunity to follow up.

Operation strategy:

London Gold:

Morning short-term in 1385-88 region to do more, stop 1382, target 1395-1400 to leave

1400-02 short stop 1404, the target disk has shown signs of 1395-90 to leave

Breakthrough 1405 to recover more, stop 1399, target-breaking 1415-20 to 1430-50 to leave

Europe and the United States fell below the 1370 chase empty, stop 1375, the target 1360-50.

Wet storage hanging over 1338 single, stop 1330, target 1350-1370.

Wet storage hanging over 1321 single, stop 1314, target 1340-1370.

Note: Due to the recent one-day volatility huge, short-term operation stops are amplified, so the operation on strict control positions, and the utilization of funds, and avoid large exposures.

Spot silver: yesterday, the price of silver in the Asia-Pacific intraday quickly stepped back turned to tensile rebound after the 4510 first-line support, the days up to 4750 test line, the price of silver more time around 4600-4750 repeated shocks, the pattern of weak trend in the mainline technical accompanied by a slight rebound demand.

The daily price of silver in the rapid decline from 5600 levels in last Friday to the 4430 line, the short side potential energy can be slowed down for three consecutive trading days of low-grade the hovering trend, the price of silver at the 4400 level in case of strong buying support, technical indicators to be gradually restored the previous passivation performance, trend regression rational. But in the medium term the price of silver has failed to break before the key support at 5300, still can not say the trend reversal.

Sorkin Roundup: days uplink focus concerned about the offensive and defensive pressure of 4750/4800, this bit to be effective breakthrough, multi-potential energy threatens to accelerate the rebound to 5000 levels, and lower short-term support at 4600, and the key support is 4400, if not below in the mid-4400 the short side potential is difficult to form a heavy volume. Expected intraday price of silver will continue to repair the rebound pattern can be repeated around 4800-4500, focusing on 4800 Powei.

Operation strategy:

Through silver:

1 short-term 4650-4600 batches to do more, stop 4580, target 4750/4800 Powei 5000 to leave

(2) has shown signs of 4750 empty, stop 4810, target 4680-4650 departure.

Breakthrough 4820 to recover more, stop 4750, target 4880-4950 departure

Hanging 5000 an empty one, stop 5080, target 4920-4820 departure

Hanging over 4515 single, stop 4420, target 4600-4750 to leave

Note: Due to the recent one-day volatility huge, short-term operation stops are amplified, so the operation on strict control positions, and the utilization of funds, and avoid large exposures.

(If the reader of my operational thinking disagree, do not follow the example of the operation, Sorkin Tips, investment risk, investors must be careful. Above suggestions are for reference only pursuant to operate your own risk)
